

ATM Lighting Design = Compliance!

Project Overview

A financial institution required GMR's aid in rectifying significant failures to meet state's ATM lighting standards. 608 reading points were taken at ATM locations; 359 did NOT meet the state's ATM lighting standards. Customer safety is a major priority; a **60%** failure rate is unacceptable to this financial institution.

“I am thrilled with the detail and accuracy of the information!”

“GMR takes away the guess work from a compliance issue.

I don't have to wonder what the problem is.”

Key Accomplishments

- ◆ The financial institution experienced a 140% improvement and complied with the state's ATM lighting standards.
- ◆ Post design implementation surveys were performed; 608 reading points were taken. 601 reading points passed lighting compliance standards. Seven points did not meet standards due to tree shadow issues.
- ◆ GMR's lighting designs took all the guess work out of the process. The financial institution's electrician simply purchased the recommended fixtures and follow the plan for installation.

Our Approach

- ◆ GMR was contracted to provide an ATM Lighting Compliance Design for each location.
- ◆ Our team of field experts conducted on-site surveys to obtain detailed site information which included building & site drawings with exact measurements, photographs, and other pertinent information.
- ◆ Custom lighting designs were prepared for each banking site by a Lighting Designer specializing in ATM lighting compliance.
- ◆ Since GMR has no affiliation electrical contractor, all lighting design strategy is solely for the financial institution to satisfy lighting and safety compliance requirements.
- ◆ Each lighting compliance design included a photometric plan and fixture specifications.

“It's a good product at a fair price. You take the burden away.”
